

RESEARCH
INTERESTS

I work in computational imaging, where we combine illumination, cameras and computation in innovative ways to sense the environment in a way that a traditional cameras can't. I currently build optical imaging systems that use the wave nature of light to achieve exciting capabilities like [seeing through scattering media](#) and [micron-scale shape acquisition](#), with applications in biomedical imaging and fabrication. Some of these are possible only [in the lab](#) now: We're bringing them [out in the open](#)!

EDUCATION

School of Computer Science, Carnegie Mellon University *Aug 2017 – present*
PhD in Robotics (ongoing)

Electrical Engineering, Indian Institute of Technology Bombay *Jul 2012 – Jun 2017*
Dual Degree (Bachelor & Master of Technology)

RESEARCH
EXPERIENCE

Computational light transport with interferometry [PhD thesis] [\[paper, webpage\]](#)
Prof. Ioannis Gkioulekas, Robotics, Carnegie Mellon University *Aug 2017 – present*

- Exploring interferometry with light sources having specially designed wave-optics properties for micron-resolution computational light transport, with applications to [optical biomedical imaging](#)
- Built a prototype interferometer on an optical table demonstrating spatially-gated and pathlength-resolved imaging and specialized it to descattering and direct-only light path imaging
- Extended the above work to implement fast, wide-field, micron-scale depth estimation, currently trying a deep learning-based pipeline for robust depth estimation and phase unwrapping
- Currently experimenting with everyday light sources to achieve the above capabilities passively, incorporating the detrimental effects of real-life conditions such as vibrations and ambient light

Optimizing acquisition for a static X-ray computed tomography system [\[paper\]](#)

Dr. Rajiv Gupta, Neuroradiology, Massachusetts General Hospital *May 2019 – Jul 2019*

- Explored reconstruction and acquisition optimization methods for a novel portable static X-ray CT system with a circular arrangement of low-power X-ray sources around the patient
- Shadowed radiologists in the hospital to understand the process of diagnosing disorders in patients

A Bayesian framework for laparoscopic image enhancement [\[paper, code\]](#), [\[paper, code\]](#)

Prof. Suyash Awate, Computer Science, IIT Bombay *Jan 2015 – Jun 2017*

- Solved a Bayesian optimization problem to undo the detrimental effects of surgical smoke, specularities and noise on laparoscopy images for better visualization and instrument tracking
- Incorporated a novel, learned, histogram-based prior on color channels to restore color contrast in the presence of smoke, and a dictionary-based model for reconstruction in the presence of specularities

Optimizing sensing for compressed sampling recovery [\[Master's thesis, paper, code\]](#)

Prof. Ajit Rajwade, Computer Science, IIT Bombay *Dec 2015 – Jun 2017*

- Designed physically-realizable compressive acquisition and patch-wise reconstruction for existing compressive cameras using a novel circularly-symmetric coherence criterion
- Empirically analyzed the looseness of various reconstruction error bounds and proposed a sampled average-case error design criterion with a proof-of-concept implementation

Estimating cosmological photometric redshifts with machine learning [\[code\]](#)

Prof. Robert Brunner, Astrophysics, Univ. of Illinois at Urbana-Champaign *May 2014 – Aug 2014*

- Developed a novel learning-based method for estimating pixel-wise redshifts in the spectra and distances of dim, faraway astrophysical sources imaged by the Sloan Digital Sky Survey
- Implemented overlapping source separation and classification into galaxies, stars and quasars

16-bit pipelined RISC processors on an FPGA [[code](#), [code](#)]

Jul 2014 – Nov 2014

– Designed in Verilog and implemented on FPGAs RISC processors based on two architectures

INVITED
TALKS

“Computational Interferometry”, Grundfest Lectures in Computational Imaging

“Interferometric Transmission Probing with Coded Mutual Intensity”, ACM SIGGRAPH 2020

“Interferometric Transmission Probing with Coded Mutual Intensity”, CVPR CCD 2020

AWARDS

Undergraduate Research Award for Master’s thesis, Indian Institute of Technology Bombay, 2017

Gold medal at the 6th International Olympiad on Astronomy and Astrophysics, representing India

Bronze medal at the 5th International Earth Sciences Olympiad, representing India

KVPY Scholarship 2011 by the Government of India for students interested in basic sciences
